

Push Down installation with enhanced flexibility

Onepush™ is our new, integrated installation system that makes resilient products fast and easy to install. The strong horizontal and vertical connections and the built-in flexibility reduce the risk of panel damage during installation.

Integrated flexibility

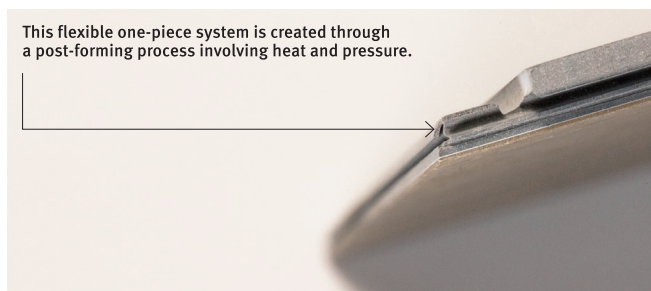

The unique flexibility is created in a post-forming process where the joint is shaped with heat. The result is a flexible, easy-to-use system and more durable products.

Tool-less installation with lasting results

The tool-less solution creates less stress and damage to both joints and panels and leads to fewer complaints and happier customers.

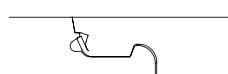

Innovative collaboration

Onepush is the successful result of an exclusive collaboration between Välinge and the European companies Inovame and Kreafin, which together developed the post-forming production method.

Tool-less installation. Panels are simply pushed into place.

PROFILE EXAMPLES

Short side

Durable installation

Strong, durable push down installation done without tools.

Extra flexible

Lower risk for panel damages during installation.

Easy dismantling

Simply angle the panels out to take them apart.
