Wood Powder Laminate

Future generation laminate surfaces

Innovative technology for strong surfaces – enabling deep embossing and offering impact resistance, lasting durability and reduced environmental impact.

High-traffic durability

The power of powder impregnation densifies both surface and core, ensuring highly durable products for residential and commercial use.

Simplified process

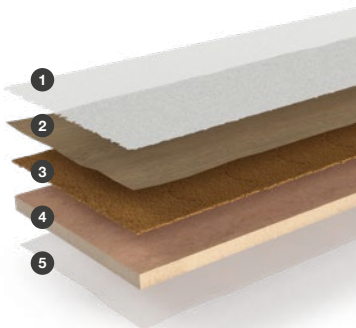

Enables the use of unimpregnated papers – extending shelf life and supporting efficient on-demand production of customised designs.

Design depth

The recycled powder layer enables deep embossing with traditional DPL process – creating surfaces with natural depth and authentic design.

Wood Powder Laminate build-up

1. Powder overlay
2. Decorative paper
3. Wood-based powder layer
4. Wood-based core
5. Paper or powder backing

woodura®

Real wood but stronger

Outstanding technology for production of real wood flooring that is more sustainable and more durable than any traditional option.

10x more flooring

Achieve 10 times more flooring from a single log compared to traditional wood floors, maximising raw material use and minimising waste.

Future-proof solution

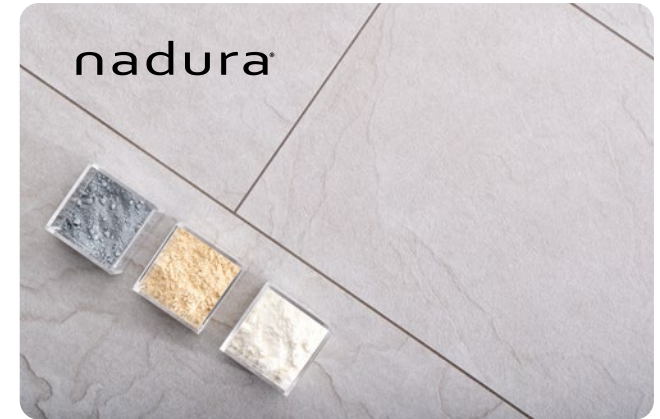

New formula, free from formaldehyde and melamine, ensures dimensional stability in larger formats and aligns with modern environmental demands.

3x stronger

Both surface and core are densified through the power of powder impregnation, creating up to 3 times stronger products with enhanced dent- and deep scratch resistance.

Woodura build-up

1. Top coat
2. Natural wood covering
3. Wood-based powder layer
4. Wood-based core
5. Wood-based powder layer
6. Wood backing layer

nadura®

Truly worry-free flooring

A unique solution for creating more sustainable flooring products with exceptional durability, outstanding wear resistance and endless design possibilities.

Outstanding durability

Exceptional surface strength with superior scratch and wear resistance – easy to maintain and built to last, with no additional surface layer needed.

Endless possibilities

Unlimited creative options for surface and texture design, combined with superior dimensional stability – even in larger formats.

Improved sustainability

New formaldehyde- and melamine-free formula combined with recycled wood powder creates a high-quality surface and makes the product both safer and more sustainable.

Nadura build-up

1. Wood-based powder layer – forming a solid surface after pressing
2. Wood-based core
3. Powder backing – balancing layer for product stability
