Acoustic coating

Noise-reducing coating for laminate flooring

Upgrade your laminate flooring with an innovative acoustic coating enhanced with natural cork particles. Engineered to effectively reduce both impact sound and in-room walking sound, it delivers a calmer acoustic environment.

This integrated solution simplifies and accelerates installation compared with loose-laid foam, delivering high acoustic performance without added complexity for manufacturers or end customers. It meets stringent impact sound requirements and provides a new, innovative alternative to pre-attached foam.

A smarter, more streamlined approach to superior acoustics — powered by the natural performance of cork.

Interested in being an early adopter and testing the technology on your products? Contact us to be among the first to help shape the next generation of laminate flooring.
